V27R558 METHYL VIOLET CF (PV-27) DISPERSION

V27R558 Methyl Violet CF (copper-ferro) is a finely dispersed pigment dispersion with excellent stability in water. It does not exhibit the poor stability characteristics usually associated with other PMA/PTMA Methyl Violet pigment dispersions.

The V27R558 is highly recommended for use in water based printing inks or other applications requiring high pigmentation levels where outstanding gloss, density and excellent vehicle compatibility are of prime importance.
